

Reinventing Crack Control in Construction: Jogani Reinforcement Brings Next-Generation Fiberglass Mesh Solutions to India

Jogani Reinforcement, a pioneering name in crack control technologies and reinforcement industry, is reshaping the future of construction with its cutting-edge **fiberglass mesh and reinforcement products**. Known for introducing India's **first patented concrete fiber technology**, the company continues to push the boundaries of innovation, safety, and sustainability.

With the launch of its latest **high-performance fiberglass mesh range**, [Jogani Reinforcement](#) has taken a bold step toward solving long-standing challenges in construction—**crack control, durability, and sustainability**. Unlike traditional methods, fiberglass mesh provides **uniform reinforcement**, reduces shrinkage cracks, and enhances the **life of concrete structures**. *"Our mission has always been to empower engineers, contractors, and builders with materials that go beyond conventional reinforcement,"* said **Mahesh Kumar**, Research Engineer, Innovator, and Technopreneur. *"Fiberglass mesh is not just a product—it's a leap toward safer, stronger, and more sustainable infrastructure for India."*

Jogani Reinforcement's fiberglass mesh is engineered to meet modern construction demands

- **Superior Crack Resistance** – Reduces shrinkage and settlement cracks in plaster and concrete.
- **Lightweight & Easy to Apply** – Simplifies installation without compromising strength.
- **Sustainable & Eco-Friendly** – Manufactured with processes that minimize environmental impact.
- **Versatile Applications** – Ideal for walls, flooring, waterproofing, repair works, and infrastructure projects.

The company's products are already being used in **large-scale infrastructure, residential, and commercial projects** across India, where builders and engineers have reported **higher durability and lower maintenance costs**. Jogani Water proofing Mesh, Jogani Plaster Joint Mesh and Jogani Super Mesh are very popular among contractors and engineers.

Jogani Reinforcement is not only transforming construction practices but also contributing to **India's vision of sustainable development**. By replacing resource-intensive traditional methods with **lightweight, efficient reinforcement materials**, the company is reducing the **carbon footprint of the construction industry**. With a growing presence across India and strategic partnerships worldwide, Jogani Reinforcement is set to expand its innovations into **international markets**, bringing Indian engineering to the global stage. Founded by **Eminent Research Engineers**, Jogani Reinforcement is a leader in **technical textiles and reinforcement solutions**. With a strong portfolio of innovations, including **India's first patented concrete fiber technology**, the company continues to provide **high-quality, reliable, and sustainable reinforcement materials** for diverse construction

applications.
